

## Real Results, Real Reviews

### **My daughter is 32 and has Rett Syndrome**

"She started on one capsule a day for 2 months, rising to 2 capsules in October 2024. We're really impressed with the results. Her depression has improved, her eye contact is greatly improved. She hasn't had a seizure since October and that was very short. She can now stand for much longer periods too. There have been no side effects so far. She's also much happier.

Very pleased so far!"

Gabriella B. (Verified Buyer, United Kingdom)

### **Young child with Pitt Hopkins**

"After taking cGP MAX®, we found that our child is willing to share his expression of needs to us rather than he is not able to speak. Other parents have also shared such to us of their children's progress. Our child stands more steadily than before and knows how to stand still by using more strength with his upper body. It is more obvious that his expression of emotions and intentions. He is exploring more without help, he yells us to hug and enfolding his arms. We observed his lip movements when we are talking to him seemingly, he wants to talk too! He is getting much and more adorable!"

## Feedback after taking cGPMAX®

"My child has no more constipation since taking cGPMAX®. He has a regular bowel movement every two days without any effort. His overall mood is much more stable. cGPMAX® is very good."

Peng Z. (Verified Buyer, China)

## Daughter with Pitt Hopkins

"We are delighted to share our remarkable experience with cGPMAX® and the positive impact it has had on our 8-year-old daughter. This exceptional product has truly been a game-changer, enhancing her overall well-being and catalyzing her learning and development journey."

Campbell T. (Verified Buyer, Australia)

## Using for someone with Rett syndrome.

"Early days, we're on the first 3 months, but hand/eye coordination is currently very good."

## Parent of young child with Rett Syndrome

“First of all we continue to be delighted with your product. We have been giving it to our daughter for over 6 months now and clearly see improvements in her attention including eye contact and ability to focus on tasks for much longer compared to before. Also she is babbling a bit more and her social interactions generally have massively improved (she holds eye contact with anyone, laughs at the appropriate times in social gatherings, shows interest in other kids or animals, etc).

We know that for some people these might be small or insignificant milestones, but for us they make a huge difference, and we are so happy that we found out about cGP and have been recommending it to all Rett parents we know as well as our other friends and family more broadly.”

Christopher H. (Verified Buyer, United Kingdom)
